CLENERGEN CORPORATION

CLENERGEN TO COMMENCE GENERATION OF ELECTRICITY AT THE 27MW/h COGENERATION POWER PLANT IN INDIA

(Chennai, India – March 7, 2010) Clenergen Corporation (**OTCQB: CRGE - BOERSE FRANKFURT: 9CE**) announced today that it has commenced generation of electricity at the 27MW/h cogeneration power plant, located adjacent to its 18MW/h biomass power plant in Kancheepuram, Tamilnadu. Total revenues from power generation at the cogeneration power plant on an annual basis are expected to exceed US\$ 20 million.

Clenergen India Private Limited, a wholly owned subsidiary of Clenergen Corporation, has arranged the sale of power exported from the 27MW plant to blue chip corporate clients at premium rates in return for round the clock supplies of electricity. Initially, the production of 15MW of power every hour will be sustained until the plant refurbishment is completed later this year, after which the plant is expected to operate at a full capacity.

Commenting on this development, Tim Bowen , Chief Executive Officer of Clenergen Corporation, said “the additional operating revenues generated from the power plant will allow the company to scale up its technical, sales and engineering management teams, as we prepare for several new biomass power plants under contract and scheduled to be operational in 2011”

About Clenergen Corporation

Clenergen Corporation is a publicly-traded company with its common stock quoted in the USA on the OTCQB Market (Symbol: CRGE) and in Germany on the First Quotation Board, Open Market of the Frankfurt Stock Exchange (Symbol : 9CE) Clenergen offers strategic clean energy generation and supply of biomass feedstock to address the requirement for renewable and sustainable supplies of electricity. Clenergen has developed a unique modular system for gasification and localized plantation management. Clenergen also plans to provide biomass feedstock for producing wood pellets for co firing with coal to produce low emission electricity.

Clenergen Corporation uses biomass feedstock to implement sustainable supplies of clean energy for captive end users, islands, mining companies, government or privately-owned power grid systems and other end users. The "Distributed Environmental Power System" marries significant proprietary advancements in plant science with proven long standing engineering technologies to achieve this goal.
